PROFESSIONAL SUMMARY

Data Engineer with hands-on experience designing and operating cloud-native ETL/ELT pipelines and analytics-ready data platforms on Google Cloud Platform. Strong proficiency in Python, SQL, Apache Airflow, and BigQuery, with experience supporting large-scale batch and near real-time data processing, implementing data quality and validation checks, optimizing performance, and ensuring reliable production analytics workflows.

EDUCATION

Master of Science in Computer Engineering

Aug. 2024 – May. 2026

University of Texas at Dallas

GPA – 3.7

Coursework: Applied DSA, Big Data Management and Analytics, Computer Vision, Artificial Intelligence

Bachelor of Technology in Computer Engineering

Aug. 2018 – May. 2022

University of Pune

GPA – 3.7

Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database System, Machine Learning

TECHNICAL SKILLS

Data Engineering & Cloud: Python, SQL, GCP (BigQuery, Dataflow), Apache Airflow, ETL/ELT Pipelines, Data Migration

Streaming & Distributed Systems: Apache Kafka, Apache Spark (Structured Streaming), Real-Time Data Processing

Databases & Warehousing: SQL Server, PostgreSQL, MySQL, TimescaleDB, Data Warehousing, Query Optimization

Data Analysis & ML: Pandas, NumPy, Scikit-learn, TensorFlow, Sentiment Analysis, Data Analysis

Software Development: Git, Docker, REST APIs, OOP, Agile **Programming Languages:** Python, C++, Java

Additional Tools: OpenCV, Pytesseract, Django, Web Scraping

PROFESSIONAL EXPERIENCE

Data Engineering Intern, Conifer Health Solutions, USA

Sep. 2024 – Present

- Migrated legacy on-prem data pipelines to GCP to address scalability and reliability constraints, enabling automated ETL/ELT workflows and analytics on 10M+ healthcare records.
- Optimized production reporting performance and data quality, reducing query latency by 45% and reporting discrepancies by 30% through query optimization and validation checks.
- Owned production data reliability by performing root-cause analysis on pipeline and database failures, delivering ad-hoc fixes and long-term optimizations that reduced incident resolution time by 40% and maintained 99% availability.

Software Engineer, Rabbit and Tortoise Technology Solutions, India

Nov. 2022 – Sep. 2023

- Built end-to-end OCR processing pipelines in Python, applying object-oriented design principles with OpenCV and PyTesseract to create a system that was scalable, modular, and easy to extend, achieving 95% text detection accuracy.
- Designed reusable components for image preprocessing, text extraction, and validation, which reduced future development effort by 40% and improved overall processing efficiency.

Software Engineer Intern, Bizsol IT Services, India

Aug. 2021 – Dec. 2021

- Built a SQL Server data integration solution to consolidate multi-source data, reducing manual reconciliation by 60%.
- Optimized SQL queries and indexing, improving reporting and operational query performance by 40%.
- Developed interactive dashboards and reports to improve business visibility and data-driven decision-making.

PROJECTS

Real-Time Financial Sentiment Analysis Platform | <https://github.com/VedantBajaj/sentiment-platform>

- Built a real-time ETL pipeline using Kafka and Spark Structured Streaming, applying sentiment analysis and entity extraction in Python to correlate financial news with stock price movements for near real-time insights.
- Optimized time-series storage in TimescaleDB and developed Grafana dashboards to monitor market trends and pipeline health in real time.

PDF OCR Based Text Extraction | <https://pdf-ocr-webapp.onrender.com>

- Developed PDF OCR web application integrating Python, OpenCV, and PyTesseract for automated text extraction.
- Designed and implemented robust backend APIs for document processing with efficient data handling.
- Created responsive frontend interface ensuring seamless user experience for document submission and result retrieval.
